Dr. Howard I. Adler
Biology Division
Oak Ridge National Laboratory
Post Office Box Y
Oak Ridge, Tennessee

Dear Dr. Adler:

We have sent you an L_p^S derivative of Hfr-1 (Cavalli) and a multiple marker F^- stock. Each of the sugar markers of the latter should be checked for purity, and reisolation may be required. Hfr-1 is the one we have worked out best. The best source of well mapped out, lambda-free Hfr stocks should be in Dr. Francois Jacob's collection at the Pasteur Institute, as he has published a series of complete maps and has tested zygotic induction in each of them.

Sincerely yours,

Esther M. Lederberg
